DPW REPORT
February 4, 2021

January has been unseasonably quiet, as we can all know. This has been good for the contractors working on the Marina "C" dock renovation. Currently, wood decking is removed and off site, all electrical has been removed along with fuel pumps and Pump out station. Main focus at this point, is to begin raising Dock house to allow installation of new support steel. This will require several additional temporary piling.

Other business includes, the purchase agreement of a Deere 524L loader from AIS corporation of Williamsburg. This machine will be delivered around April-May (?). At time of delivery, we potentially will have our existing loader sold.

Also a quote from Zerimba Equipment of Gaylord for a 2021 International HV truck to replace DPW current 1999 Sterling dump truck, has been decided on. This particular truck will then have to be fitted out at Truck &Trailer of Boyne Falls, and will take roughly 10 months to complete. Details to come.

DPW has had the opportunity to dispose of much of the brush and yard debris, from our 8th st. location recently. Much of this was burned on sight, to reduce cost and time. Material that was not burned, then was hauled to KAL.

DPW have received a quote for a Salt/Sand barn, to be located at the 8th st. shop. This proposal comes from Greystone Construction of Shakopee, MN. We (DPW), feel that the design and construction of their product, as proposed, would be a very good investment for the Village and a benefit to the environment. The cost for furnish and Install budget price is $71,600. Other cost would be required for site prep, Asphalt, and grading of building site. This structure would house up to 335 tons Of salt/ sand product. Details available, upon request.

Other building news, Bay Area Recycle representatives looked over the old DPW garage on 7th St. for potentially removing and repurpose, this structure. This maybe a win-win for the Village, in hopes of future development for this property. Recently, I was contacted by Elmers's, looking for a location to stock pile stone rip-rap, for a upcoming project in the area. This could work out with trading some space for sight restoration at the 7th st. Location? More information to come...

DPW has received quotes from Garage Door Services, replace 3 of the large overhead doors for the 8th St. DPW garage. These doors are in rough condition, are in need of replacement, due to the fact there are no available replacement Panels available. This is not super time sensitive, but should addressed by fall of 2021.

Other activity has been interior Maintence to our well houses and water tank facilities. DPW Water Reliability Study has been approved by EGLE, with no corrections or revisions. This brings us up to date, in accordance to state mandates, and a added value to Village Municipal water Management. Respectfully Submitted C.Holton
