REGARDING: Proposed new house at 226 E. Fifth Street, Northport.

Charles,

Jarvis Custom Home Builder, LLC plans on building a new home at 226 E. Fifth Street in Northport within the 1% Annual Chance Floodplain. The 1% Annual Chance Flood elevation is 584. 2 feet (NAVD '88) as indicated in Flood Insurance Study 26089CV000A with an effective date of August 28, 2018. It is proposed from the builder that the lowest habitable floor elevation will be at least 587.2 feet (NAVD '88).

After the floor is constructed, I can complete an as-built survey to certifying the lowest habitable floor elevation in relation to the floodplain.

Regards,

Michael K Geisert, PS
