# DPW REPORT

December 8,2022

Winter preparation for the Marina is mostly complete. Aces Diving Service have contracted with us for several years, taking care of the submerged bubbler hoses. They will be on site soon to make any repairs or replacements needed.

PFAS testing has been done on Municipal well #3 with results of trace amounts, just over the detection limits. These results are also monitored by DPW and staff are looking at potential Cost Recovery Programs that may help off set the substantial cost of required monitoring.

E. 4th. St. has had soil borings completed by Pierson Technical Drilling, under the direction of Prein&Newhof Engineering. This is one of several steps in addressing the ongoing drainage issues along this street end.

DPW went over several options pertaining to the electrical upgrades at the proposed Marina parking & ramp improvements, with representatives from Neilis Engineering.

DPW have contracted with Parshall Companies to remove several dead trees in the Villages ROW, along with several stumps. This will most likely happen early in the Spring of 2023.

DPW recently participated in Consumers Energy Smart Streetlight Pilot Light grid project. This is a new program that C/E is trying with select communities in Michigan. It is a very involved process to initiate, but We believe it will be beneficial to the Village of Northport, long term.

We have received a preliminary cost estimate for the Rose Street Culvert Replacement, over Northport Creek. Prein&Newhof Engineering have provided the planning and construction engineering information for this Potential future project. Total projected cost: $245,565.

Big a shout out to all that help make the Tree lighting and Holiday festivities a great success, especially in (some what) short notice. Thank You!

Respectfully Submitted
