DPW Report

January 29, 2026

DPW has kept busy with nearly daily snow plowing / removal. I have had several on site meetings with representatives from Machin Engineering, looking at the potential upgrade of the Rose street culvert, located near the Visitor Center. This is a/?\m bit u]a complex project, due to the utilities in this corridor.

I met with representatives from 45th Parallel Marine Construction On January 13, at the marina to look at lowering the “finger piers” Because of the extreme low lake levels. 45th will put together a Bid package, with several options. Hopefully, we will have something For the February meeting.

DPW had to have maintenance work done our 2015 GMC dump truck. Van’s of Leland, had to replace the front brakes and service.

Had a meeting with Jered, Robin Schmidt from EGLE and Dan DeVaun, from GEI, to discuss moving forward for permitting process and the potential for drawdown and maintenance work, on the Mill pond dam.

DPW would like to acknowledge that one of our team, has had to step down from his role as a full time employee, due to health issues. Kent will be sorely missed indeed. He will still be a great source of Information and institutional knowledge , that we can occasionally hopefully tap into, when needed. We wish him the best!!

Chris Holton
DPW superintendent
