DPW Report
July 16, 2026

Recent heavy rains and the 4th of July, have had DPW staff very busy. Prior to the extreme rain event, we did much needed maintenance on several streets, with more to come.

The Mill pond is currently drained down, by recommendations from EGLE. This was a controlled draw down over several days, in order for representatives from GEI Engineering to inspect the condition of the Dam and its spill way structure. A full report on findings will be released in the near future.

We have been in communication with Anavon for our security cameras on the Village Water tank and the 3 municipal water wells. DPW was informed that cameras will be in place by end of this month.

DPW has worked on clearing the south beach area, near the Youth Sailing School. We also cleaned up the storm water discharge area.

We have contracted Lee.Co.Rd. Comm. to resurface W.7th.street. This will be from Mill st. Westward to Warren Street. DPW will Prepare the existing road surface to be tar and chipped then will be FOG sealed, as the finished surface.

DPW will be restoring Haserot beach, as the recent heavy rains have caused a fair amount of erosion.

DPW staff looks forward to potentially having a new team member on our crew in the near future. Interviews are ongoing.

Respectfully

Chris Holton DPW
